

DRAGON[®]

“Queen” Regasification Trailer

DESIGNED TO PERFORM

The ACT 16,000-gallon mobile storage vessel is used as a mobile customer station and will have electric vaporizers to be used in LNG regasification. The oversized vessel meets all DOT regulations, is designed for maximum capacity, and is only legal to haul over the road empty. On-site the vessel will act as large capacity storage for LNG that will be transported to the site by separate LNG transport tankers.

Vaporizer operation is sized for extreme ambient temperatures to ensure efficient operation even in the coldest regions (such as Canada). The system components required for vaporization will be mounted in the piping cabinet, underbelly, and on the sides of the vessel.
